DETAILED ACTION

Allowable Subject Matter

1. Claims 1-45 are allowed.
2. The following is an examiner's statement of reasons for allowance:
3. **As per claims 1 and 17 and dependent claims 2-16 and 18**, the examiner found no reference in the prior art that disclosed or made obvious an apparatus comprising a controller, electrically connected to an imaging sensor, the controller actuating read-out of the electronic representation from the imaging sensor to provide an image frame including a first region having a first resolution and including a second region having a second resolution that is higher than the first resolution as recited in independent claims 1 and 17.
4. **As per claim 19 and dependent claims 20-29**, the examiner found no reference in the prior art that disclosed or made obvious a method comprising the step of binning charge from separate pixel elements of sensors for read-out with an electronic controller and forming a three-dimensional image of cardiac tissue from the binned representation as recited in independent claim 19.
5. **As per claim 30 and dependent claims 31-45**, the examiner found no reference in the prior art that disclosed or made obvious an apparatus comprising a controller electrically connected to an imaging sensor, the controller actuating read-out of a multi-resolution mode electronic representation from the imaging sensor as recited in independent claim 30.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: U.S. Patents **5,150,394**; **5,465,284**, and **6,031,892** to Karellas et al. The disclosed systems and methods incorporate an X-ray source, scintillator, optical coupler, binning sensor and CCD controller to affect the imaging of the internal structures of a patient.

7.

Another object of the invention is to provide an X-ray diagnostic apparatus using a large vision field, high resolution X-ray flat panel detector, capable of carrying out image processing flexibly by changing resolution corresponding to the size of an observation region relative to the X-ray flat panel detector.
